KODIAK MANAGEMENT AREA
SALMON ESCAPEMENT CUMULATIVE COUNTS FOR FISH-WEIRS,
1986-1995

By

Joan R. Brodie

Regional Information Report¹ No. 4K96-34

Alaska Department of Fish and Game
Commercial Fisheries Management and Development Division
211 Mission Road
Kodiak, Alaska 99615

May 1996

¹The Regional Information Report Series was established in 1987 to provide an information access system for all unpublished division reports. These reports frequently serve diverse ad hoc informational purposes or archive basic uninterpreted data. To accommodate timely reporting of recently collected information, reports in this series undergo only limited internal review and may contain preliminary data; this information may be subsequently finalized and published in the formal literature. Consequently, these reports should not be cited without prior approval of the author or the Division of Commercial Fisheries.

ACKNOWLEDGEMENTS

Sincere gratitude is extended to all of the many seasonal weir camp employees throughout the past ten years who have made these numbers a reality. The time they spent enduring bugs, slimy dead fish, bears, and some long hours; as well as time spent away from family, friends, a hot shower, running water, electricity, and certain foods are much appreciated. Thanks also to the hard working and dedicated Finfish Management staff in the office coordinating, supporting and documenting this effort.

INTRODUCTION

This report contains the salmon weir escapement enumerations for the Kodiak Management Area in 1995 and compares these counts with those of the previous nine years. The Alaska Department of Fish and Game, (ADF&G), utilizes escapement data collected at weirs on Kodiak, Afognak, and Shuyak Islands to manage commercial, sport and subsistence fisheries. The ADF&G Division of Commercial Fisheries and Development funds and operates the majority of these weirs. Funding for the Frazer fishpass, Malina weir and Pauls Bay weir comes from the Kodiak Regional Aquaculture Association. ADF&G Division of Sport Fish funds and operates the Buskin River weir and Alaska Department of Natural Resources (ADNR), Division of State Parks operates two weirs on Shuyak Island. The Uganik River weir was funded and operated by the U.S. Fish and Wildlife Service.

From 1986-1995 the number of weired systems has fluctuated with fisheries management needs or available funding. Additionally, new weirs have been installed over the past years to address specific management concerns, such as the Buskin River weir, first installed in 1985, which receives subsistence, sport and commercial use. A total of 13 weirs were operated in 1995 (Table 1).

Fish weirs are man-made structures with the primary function of allowing accurate total enumeration of adult salmon during their upstream spawning migration from saltwater to freshwater. This escapement information provides the basis for inseason management actions which regulate all user groups (commercial, sport and subsistence) harvesting salmon. All five species of Pacific salmon along with steelhead trout and Dolly Varden are enumerated.

Operation of these weirs begins in mid-May to early-June and continues until late-August to late-September depending upon the nature of salmon populations in a particular system.

Weirs operated between 1986 and 1995 are as follows:

KARLUK WEIR is approximately 320' long, located about 1/8 mile upstream from the confluence of Karluk River and Karluk Lagoon on the southwest side of Kodiak Island. First constructed in 1924, it is operated by two to four ADF&G employees from mid-May to late September. Escapements for 1995 can be seen in Table 2 and escapement by species in Tables 15-21 for the years 1986-1995. Figures 1 and 2 compare the upper and lower biological escapement goals of the early and late sockeye salmon runs for Karluk weir to the actual early and late sockeye escapement counts at Karluk weir in 1995, respectively.

AYAKULIK WEIR is approximately 190' long, located about 1/8 mile upstream from the confluence of Ayakulik River and Shelikof Strait on the southwest side of Kodiak Island. First constructed in 1929, it is operated by two to three ADF&G employees from late-May to early-September. Escapements for 1995 can be seen in Table 3 and escapement by species in Tables 22-28 for the years 1986-1995. Figure 3 compares the upper and lower biological sockeye salmon escapement goals for the Ayakulik weir to the actual sockeye escapement counts through the Ayakulik weir in 1995.

DOG SALMON WEIR consists of three weirs their lengths being 117', 125' and 25' on the three forks of Dog Salmon River which drains from the Frazer Lake system on the southend of Kodiak Island. First constructed in 1984, it is operated by two ADF&G employees from early-June to early-September. Escapements for 1995 can be seen in Table 4 and escapement by species in Tables 29-35 for the years 1986-1995. Figure 4 compares the upper and lower biological sockeye salmon escapement goals for Dog Salmon weir to the actual sockeye escapement counts at Dog Salmon weir in 1995.

FRAZER LAKE consists of a series of "fish ladders" which allow salmon to ascend around a 30' falls, near the outlet of Frazer Lake on the southend of Kodiak Island. Counts are made at the outlet of the fishpass. Constructed in 1962 to accommodate a sockeye salmon stock introduced in 1951, it is operated by two ADF&G employees from mid-May to mid-August. Escapements for 1995 can be seen in Table 5 and escapement by species in Tables 36-39 for the years 1986-1995.

UPPER STATION WEIR is approximately 80' long, located 60 yards below the outlet of lower Upper Station Lake on the southend of Kodiak Island. It was moved to the outlet of Upper Station Lagoon near its confluence with Olga Bay in 1993. First constructed in 1929, it is operated by two ADF&G employees from late-May to mid-September. Escapements for 1995 can be seen in Table 6 and escapement by species in Tables 40-46 for the years 1986-1995. Figures 5 and 6 compare the upper and lower biological escapement goals of the early and late sockeye salmon runs for the Upper Station weir to the actual early and late sockeye escapement counts at Upper Station in 1995, respectively.

AKALURA WEIR is approximately 60' long, located about 1/8 mile upstream from confluence of Akalura Creek and Akalura Lagoon on the southend of Kodiak Island. First constructed in 1923, it is operated by one to two ADF&G employees from late-May to late-September. Escapements for 1995 can be seen in Table 7 and escapement by species in Tables 47-53 for the years 1986-1995. Figures 7 and 8 compare the upper and lower biological escapement goals of the early and late sockeye salmon runs for Akalura weir to the actual early and late sockeye escapement counts through this weir in 1995, respectively.

SALTERY WEIR is approximately 120' long, located about 1/4 mile below the outlet of Saltery Lake on the northeast side of Kodiak Island. First constructed in 1985, it is operated by one ADF&G employee from early-June to mid-September. Escapements for 1995 can be seen in Table 8 and escapement by species in Tables 54-60 for the years 1986-1995. Figure 9 compares the upper and lower biological sockeye salmon escapement goals for Saltery weir to the actual sockeye escapement counts at Saltery weir in 1995.

BUSKIN WEIR was first constructed in 1985 approximately 1 mile above the confluence of the Buskin River and Chiniak Bay, on the northeast side of Kodiak Island. It is approximately 125' long, and is operated by three ADF&G employees from late April to early October. In 1992, a 109' long "sockeye" weir was constructed at the outlet of Buskin Lake, approximately 4 miles above the other weir. This location was chosen to avoid the frequent washouts which occur at the lower site, and thereby obtain a more accurate sockeye enumeration. The same three ADF&G employees operate this weir throughout the sockeye return from late April through July 31. Since 1992 the lower site has operated only from August 15 to early October primarily to enumerate coho salmon. Escapements for 1995 can be seen in Table 9 and escapement by species in Tables 61-67 for the years 1986-1995. Figure 10 compares the upper and lower biological sockeye salmon escapement goals for the Buskin River to the actual sockeye escapement counts for 1995.

LITNIK WEIR is approximately 120' long, located about 30 yards above the confluence of Litnik River and Litnik Lagoon on the southend of Afognak Island. First constructed in 1978, it is operated by an ADF&G employee and volunteer from late-May to mid-September. Escapements for 1995 can be seen in Table 10 and escapement by species in Tables 68-74 for the years 1986-1995. Figure 11 compares the upper and lower biological sockeye salmon escapement goals for Litnik weir to the actual sockeye counts through Litnik weir in 1995.

PAULS BAY WEIR is approximately 20' long, located at the confluence of Paul's Creek and Perenosa Bay on the northend of Afognak Island. First constructed in 1984, it is operated by two ADF&G

employees from early-June to mid-September. Escapements for 1995 can be seen in Table 11 and escapement by species in Tables 75-81 for the years 1986-1995. Figure 12 compares the upper and lower biological sockeye salmon escapement goals of Pauls Bay weir to the actual sockeye escapement counts through the weir in 1995.

THORSHEIM WEIR is approximately 30' long, located about eighty yards above the confluence of Thorsheim Creek and Thorsheim Lagoon in Paramanof Bay on the northwest side of Afognak Island. First constructed in 1986, it was operated by one ADF&G employee, primarily from early-June to Mid-July. Thorsheim weir has not operated since 1989. For escapement information on this weir refer to R.I.R. #4K93-31.

PERENOSA WEIR is approximately 60' long, located below the fish pass on Portage Creek in Discoverer Bay on the northend of Afognak Island. First constructed in 1987, it is operated by two ADF&G employees (same people oversee Paul's Bay weir), primarily from early-August to mid-September. This weir has not operated since 1993. Escapement information can be found in R.I.R. #4K93-31.

UGANIK WEIR is approximately 220' long, located 1/4 mile upstream from the confluence of Uganik River and East Arm Uganik Bay on the northwest end of Kodiak Island. It was first constructed in 1928, running each year until 1932. Uganik weir was reconstructed in 1990, a floating weir design, and was operated by three U.S. Department of Fish and Wildlife employees from early-June to early-October. Uganik weir was operated in 1991 and 1992, and escapement information can be found in R.I.R. #4K93-31.

MALINA CREEK WEIR is approximately 30' long, located near the outlet of Lower Malina Lake on the southwest end of Afognak Island. First constructed in 1992, it is operated by two ADF&G employees from early-June to mid-August. Escapements for 1995 can be seen in Table 12 and escapement by species in Tables 82-86 for the years 1992-1995. Figure 13 compares the upper and lower biological sockeye salmon escapement goals for Malina weir to the actual sockeye escapement counts through this weir in 1995.

WATERFALL CREEK is a series of waterfalls spanned by "fish ladders" allowing passage of salmon to Waterfall Creek on the northend of Afognak Island. The "fish ladders" were constructed in the early 1980's and were operated by two ADF&G employees from late-July to early September. Waterfall has not been operated since 1992. Escapement information can be found in R.I.R. #4K93-31.

BIG BAY WEIR is approximately 30' long, located at the head of Big Bay on the westside of Shuyak Island. First constructed in 1988, it is operated by a volunteer and employee of the ADNR Division of State Parks from early-August to mid-September. Escapement counts for 1994 can be seen in Table 13 and escapement by species in Tables 87-89 for the years 1988-1994.

BEAR CREEK WEIR is approximately 25' long, located near the head of Carry Inlet on the northend of Shuyak Island. First constructed in 1986, it is operated by two volunteers of ADNR Division of State Parks from early-August to mid-September. Escapement counts for 1995 are in Table 14 and escapement by species in Tables 90-92 for the years 1987-1995.

Table 1. Escapement summary for systems with fish weirs in the Kodiak Management Area, 1995.

| Weir Locations | Dates | | Salmon Species Enumerated | | | | | Total |
|--------------------------|--------------|--------------|---------------------------|------------------|------------------|----------------|----------------|----------------------|
| | Installed | Removed | Sockeye | Chinook | Pink | Coho | Chum | |
